

Executive Competitive Radar & Due Diligence

The 3Sci **Competitor Shift Radar** is a zero-setup, client-side intelligence platform designed for founders, investment partners, and corporate strategists. It converts a raw roster of competitor names into a multi-parameter comparative matrix and complete executive reports without requiring tedious manual data entry.

1. The 3-Step Rapid Workflow

Step 1: Enter Company Names

Type company names into the left-hand roster (up to 10 entities). Mark one firm as the **Benchmark Firm**. All other targets will be systematically benchmarked against it.

Step 2: Configure Dimensions

Use the parameter ribbon to choose comparison lenses: *General Landscape Overview*, *Core Product*, *Target Customer*, *Observed Moat*, *Pricing*, *Tech Stack*, or *Culture*.

Step 3: Generate Live Reports or Export AI Prompts

Execute instant due diligence briefings natively in-browser using **Gemini 3.8 Flash**, or copy the dynamically assembled prompt into ChatGPT, Claude, or Perplexity. Export the final intelligence brief as a formatted Word Document (.DOC) or print-ready PDF with one click.

2. Configurable Comparison Dimensions

Parameter Dimension	Analytical Focus	Primary Strategic Value
★ General Landscape Overview	High-level categorization and market stance	Executive summaries without cluttered detail; ideal for fast stakeholder briefings.
Core Product / Value Prop	Flagship offering and unique differentiation	Identifies direct vs. adjacent overlaps in operational deliverables.
Target Customer & Positioning	Buyer personas, mid-market vs. enterprise	Pinpoints customer segments neglected by competitors.
Observed Moat / Vulnerability	Defensibility, IP, distribution vs. churn risks	Reveals where competitors are vulnerable to swift counter-positioning.
Pricing Strategy & Tiers	SaaS subscription tiers vs. value-based rates	Exposes pricing power gaps and monetization rigidity across rivals.
Tech Stack / Velocity	Modern AI-enabled architecture vs. legacy tech	Measures rapid engineering delivery speed and disruption resilience.

Data Privacy Guarantee: 100% Client-Side Architecture. Target rosters and API keys are stored solely in your local browser sandbox. No user telemetry is tracked.

3. Native In-Browser Execution vs. Prompt Studio

The workspace accommodates both closed-loop internal execution and multi-model external workflows.

Option A: Native Gemini 3.8 Flash Runner

Target User: Strategists who want instant executive results without switching browser windows or managing multi-app copy-pasting.

- Uses Google's frontier gemini-3.8-flash reasoning model.
- Enter a free API key from aistudio.google.com.
- Key is securely stored in local browser localStorage.
- Click ⚡ **Generate Report** for an in-place brief.

Option B: Precision Prompt Studio

Target User: Users utilizing paid ChatGPT Plus, Claude Team, or Perplexity Pro environments.

- Automatically compiles custom user questions into an executive prompt.
- Embeds the 10-company matrix and selected active parameters.
- Applies structured due diligence personas and grading rubrics.
- Click **Copy Prompt for a Report** and paste directly.

4. Export Capabilities & Deliverables

Export Format	Generated Output Contents	Recommended Use Case
 Download Report (.DOC)	Word-compatible briefing containing executive narrative, defensibility scorecard, and competitive findings.	Direct editing, client proposals, investment memos, and board deck preparation.
 Download Report (PDF)	Clean, printer-formatted executive brief with headers, clean typography, and zero UI clutter.	Formal distribution to executive committees, advisory boards, and co-founders.
 Save JSON Configuration	Raw companies.json roster including benchmark flags.	Saving target rosters for future sessions or headless crawler pipelines.

5. Evaluation Persona Angles

- **M&A Due Diligence & Commercial Defensibility:** Forensic analysis focusing on margin stability, customer retention moats, and execution barriers.
- **Founder Strategy & Positioning Gaps:** Highlights asymmetric market openings, commoditized competitor features, and pricing white space.
- **Executive Career Health & Hiring Velocity:** Evaluates organizational momentum, tech stack modernness, and turnover risks for job seekers.

6. Executive Playbooks by Role

For Founders & CEOs: Asymmetric Counter-Positioning

Incumbents cannot rapidly match specialized offerings without cannibalizing existing revenue models. Run the radar with your firm as Benchmark against 4–6 market leaders using the *General Landscape*, *Observed Moat*, and *Pricing Model* parameters. Use the generated brief to identify structural blind spots and craft high-converting pitch narratives.

For Investors & M&A Partners: Pre-LOI Defensibility Audits

Before issuing a Letter of Intent or committing venture capital, benchmark the acquisition target against its direct competitive landscape. Use the **M&A Due Diligence** angle with custom questions probing customer churn and platform lock-in. Export the resulting .DOC file directly into your investment committee packet.

For Executive Job Seekers: Interview Leverage & Risk Mitigation

Avoid taking leadership roles at stagnating firms with legacy tech debt. Select the **Executive Career Health** angle and review the *Tech Stack / Velocity* and *Hiring Signals* parameters. The generated report provides 3 sharp, unasked operational questions to pose to the CEO during final interview rounds.

7. Troubleshooting & FAQ

Scenario / Symptom	Resolution Step
Gemini API Error	Verify that your API key is active from aistudio.google.com and that your network permits outbound HTTPS traffic to Google Generative Language APIs.
Matrix Looks Cluttered	De-select detailed parameter pills and toggle only ★ General Landscape Overview for a simplified high-level strategic summary.
Export File Blocked	Allow browser pop-ups for local files or GitHub Pages to let the generated Word document and print dialog download automatically.
